Relay: The Developer Acceleration Bridge

The Ultimate Pitch Deck

SLIDE 1: Title Slide

Headline: RELAY
Sub-headline: The Live Nerve Center for High-Velocity Engineering Teams.
Visual Idea: The pitch-black, OLED-optimized Material 3 home screen of Relay, showcasing live terminal outputs and active teammate cursors.
Speaker Notes: "We aren't building another dashboard. Dashboards are dead data. We built Relay: a zero-latency, high-velocity bridge that connects your IDE, your cloud infrastructure, and your entire team into a single live nerve center."

SLIDE 2: The Bottleneck

Headline: Death by a Thousand Tabs
Bullet Points:

- **Context Switching is Killing Flow:** Engineers lose 4+ hours a week jumping between VS Code, GitHub, CI/CD, and Slack.
- **Silent Failures:** Pipelines break in the background, and nobody notices until someone manually refreshes a web page.
- **The Blind Spot:** Teams are siloed. You don't know who is touching what file until a merge conflict happens.
  Visual Idea: A chaotic, glowing tangled web of logos (GitHub, Jenkins, VS Code, Slack) overwhelming a developer.
  Speaker Notes: "The modern development stack is fragmented. Writing code is fast, but tracking what happens *after* you write code is painfully slow. We are solving the friction of modern software delivery."

SLIDE 3: The Solution

Headline: Total Workflow Telemetry
Bullet Points:

- **The Bridge:** Relay acts as an instantaneous, bidirectional bridge between local development and cloud infrastructure.
- **Ambient Awareness:** Get critical, actionable intelligence—like broken builds, stalled PRs, and teammate activity—pushed straight to your mobile device instantly.
- **Ship Faster:** Eliminate the wait time. When a pipeline fails, you know before you've even left your desk.
  Visual Idea: A sleek, high-speed data flow diagram: Local IDE ↔ Go Telemetry Backend ↔ Relay Mobile App.
  Speaker Notes: "Relay removes the friction entirely. We take your entire development lifecycle and compress it into a highly actionable, zero-noise mobile command center. You ship faster because you never lose context."

SLIDE 4: The Core Engine

Headline: Designed for 60fps Flow State
Bullet Points:

- **Live IDE Syncing:** Real-time, bidirectional syncing. If your teammate opens a file in Neovim or VS Code, you see it instantly on Relay.
- **Actionable Attention Cards:** Swipeable, high-contrast alerts that let you retry failed CI/CD pipelines or approve PRs with a single tap.
- **Interactive Team Pulse:** A dynamic dock that shows exactly what your team is working on right now, preventing merge conflicts before they happen.
- **Optional AI Telemetry:** AI that automatically reads and summarizes failed build logs before you even open them.
  Visual Idea: A stunning 4-grid mockup of the dark-mode UI: the Team Pulse dock, the Actionable Attention cards, and the Live Timeline.

SLIDE 5: The Tech Stack

Headline: Uncompromising Performance
Bullet Points:

- **Frontend:** React Native (Expo) & Reanimated. Built for butter-smooth 60fps micro-interactions.
- **Backend:** High-performance Go (Golang) architecture designed to handle massive, concurrent Server-Sent Event (SSE) diff

streams with zero latency.
- **Integrations:** Custom VS Code Extension for real-time local context capture.
- **Design System:** Material 3 Dark. Pitch-black OLED UI (#000000) built strictly for developer focus and battery efficiency.
  Visual Idea: A hardcore, technical architectural diagram highlighting the low-latency Go backend and the Expo frontend.

SLIDE 6: Synergy with iQOO (The Edge)

Headline: Extreme Performance meets Extreme Hardware
Bullet Points:

- **Built for Speed:** iQOO's elite processing power is the perfect match for Relay's real-time, high-frequency data streams.
- **OLED Perfection:** Relay's absolute pitch-black (#000000) interface is engineered to look breathtaking and save battery on premium iQOO OLED displays.
- **For the Power User:** iQOO builds phones for people who demand speed. Relay builds software for engineers who demand the exact same thing.
  Visual Idea: The sleek Relay UI running flawlessly on a futuristic iQOO smartphone frame.

SLIDE 7: The Future

Headline: Ship Faster. Zero Noise.
Bullet Points:

- Step away from the desk without losing your grip on the codebase.
- A centralized bridge that accelerates engineering velocity by eliminating context switching entirely.
  Closing: "Relay: The bridge to faster development."
